## 1 IMMEDIATE CARE

After delivery make sure you water your plant until the soil is moist then check over the plant to make sure it is in good condition.

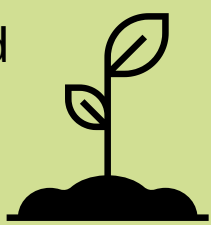

## POSITION 2

- Growing conditions: In a pot, container, in a border, lavender pretty much grows in any area
- Soil: Well-drained neutral to alkaline soil
- Light: Full sun

## 3 PLANTING

It is important that you remove the plant from its nursery pot, so plant in a container or in the ground as soon as possible.

## ESTABLISHING 4

Water in small amounts, the soil should be moist at all times, we recommend watering close to the base of the plant instead of at the top.

## 5 CARING

- Prune after flowering in August
- Try not to remove any green shoots as this can damage or kill your plant
- Move to frost-free areas in winter (the new location still needs sunlight and air circulation)
